

Student Mentoring

by students for students of the Faculty of Computer Science and Electrical Engineering

The aim of the mentoring is to support students in their start into the master's program and in particular in the self-organization of their studies. The mentors, who have themselves mastered this start into student life in recent years, are available to assist their mentees with any questions that may arise. Student mentoring is organized in mentoring groups, each of which is supervised by several mentors at the same time.

For more information, see:

www.ief.uni-rostock.de ► Studium ► Mentoring ► Mentorin oder Mentor werden – Erstsemester unterstützen

You as mentor:

- support our first-year students for the duration of the semester in their entry into the master's program
- exchange experiences and tips with previous mentors
- create improvements in the study together with the teachers

Requirements:

- you are studying for a Master's degree in Computer Science, Computer Science International, Business Informatics, or Visual Computing from the second semester onwards
- you would like to support our students at the beginning of their master studies

This is what you get:

- A preparatory workshop will provide you with important information about mentoring and how you can act as a mentor. The workshop will probably take place in the week before the introduction week for freshmen.
- Development of own soft skills through active application in mentoring
- Crediting of 6 ECTS as non-technical elective subject

Send your informal application (preferably with photo) to:

mentoring.ief@uni-rostock.de

Deadline is 30.06.

Address the three questions in your application:

- Who are you?
(Name, semester, field of study,...)
- What do you expect from mentoring?
(Topics in the workshop, team guidance, soft skills,... This helps us to design a workshop).
- Do you have any experience?
(experience as team leader, mentee, ...)
